**Wastewater Engineering** Ashok Kumar Gupta 2023-07-24 Wastewater Engineering: Issues, Trends, and Solutions explains current treatment scenarios of wastewater in different countries across the globe, the characteristics of wastewater, and rules and regulations associated with the treatment and disposal/reuse of wastewater. It covers the design and theory involving laying of sewerage network and different conventional and advanced treatment technologies employed to treat domestic wastewater. It overviews different types of emerging contaminants and their properties, ecological impacts, detection/quantification, treatment technologies, and circular economy. Features: Gives an overview of current wastewater treatment scenarios across the world. Provides insights into emerging contaminants sources, procedure to sample, available methods for analyses, and possible treatments. Reviews existing rules and regulations on wastewater engineering and standards for wastewater disposal or reuse. Includes how to use wastewater as a resource in the context of circular economy. Describes fundamentals of wastewater conveyance and treatment. The book is aimed at graduate students and researchers in wastewater treatment, water, and environmental engineering.

**Indian Water Policy at the Crossroads: Resources, Technology and Reforms** Vishal Narain 2016-01-12 This book reviews and analyzes emerging challenges in water policy, governance and institutions in India. Recent times have seen the contours of water policy shaped by new discourses and narratives; there has been a pluralization of the state and a changing balance of power among the actors who influence the formulation of water policy. Discourses on gender mainstreaming and Integrated Water Resource Management (IWRM) are influential, though they have often remained rhetorical and difficult to put into practice. Debate over property rights reform and inter-linking of rivers has been polarized. At the same time, there has been a rising disenchantment with policy initiatives in participatory irrigation management, cleaning up of water bodies and pollution control. Fast depletion of groundwater resources and the importance of adopting new irrigation methods are getting increased focus in the recent policy dialogue. The contributors review current debate on these and other subjects shaping the governance of water resources, and take stock of new policy developments. The book examines the experience of policy implementation, and shows where important weaknesses still lie. The

authors present a roadmap for the future, and discuss the potential of alternative approaches for tackling emerging challenges. A case is made for greater emphasis on a discursive analysis of water policy, to examine underlying policy processes. The contributors observe that the ongoing democratization of water governance, coupled with the multiplication of stresses on water, will create a more visible demand for platforms for negotiation, conflict resolution and dialogue across different categories of users and uses. Finally, the authors propose that future research should challenge implicit biases in water resources planning and address imbalances in the allocation of water from the perspectives of both equity and sustainability.

*Urban Water Supply and Governance in India* Satyapriya Rout

2022-05-15 This book investigates institutional dimensions of urban water supply in India, with a specific focus on institutional capabilities to provide drinking water to urban households in an efficient, equitable and sustainable manner. This book has been developed through empirical research within the context of growing urbanisation and increasing water needs of Indian cities, and the wider developmental goal of achieving universal and equitable access to safe and affordable water for all – as envisaged in goal 6 of the SDGs. This study revolves around three important aspects of urban water supply and governance. Firstly, it attempts to understand household water service delivery scenarios in urban India, drawing from case studies based on our household survey in four cities – Ahmedabad, Bangalore, Kochi and Hyderabad. Secondly, it examines the question of existing socio-economic inequality and access to water in an urban context in India. While dealing with the issue of inequality and access to water, it attempts to explore the question of whether access to water and water scarcity is socially neutral; whilst also analysing the mechanisms employed by the urban poor to manage their daily water needs. Thirdly, this book explores the role of institutions for efficient and effective delivery of water in urban India. The institutional analysis from a comparative perspective provides important insights to guide current reforms in domestic water supply in India, especially in a neo-liberal context. The book is a valuable resource for academicians,

policy makers and practitioners involved in water governance in general and domestic (drinking) water supply in particular. Besides, it is of great interest to those working in the area of urban development, urban planning and household water management. The book is an outcome of a collaborative research project by the authors sponsored jointly by University Grants Commission (UGC), New Delhi and UK-India Education and Research Initiative (UKIERI).

**Water and Sanitation in the New Millennium** K.J. Nath 2017-09-25 This contributed volume is about water resources, their variability with prevalent environmental conditions and its sustainable management in India. Water has always been the life line for survival. An adequate supply of safe drinking water is one of the major pre-requisites for a healthy life. Time and again water has been a means of consolidating power in the human society. In the beginning of the new millennium, water has become a major issue in India. India is known to have the gift of its unique river systems have abundant water resources but ironically India faces severe water crises and other water management issues on a vast scale. The water related issues in India varies with both time and space. From crises of potable water, lack of sanitation, water borne diseases, to pesticide and heavy metal contamination, water related predicaments are highly prevalent in India and are more grave in rural set up.

**Recycling and reuse of treated wastewater in urban India** World Bank. Water and Sanitation Program (WSP) 2016-10-01

Water Law for the Twenty-First Century Philippe Cullet 2009-10-27 In the face of growing freshwater scarcity, most countries of the world are taking steps to conserve their water and foster its sustainable use. Water crises range from concerns of drinking water availability and/or quality, the degradation or contamination of freshwater, and the allocation of water to different users. To meet the challenge, many countries are undergoing systemic changes to the use of freshwater and the provision

of water services, thereby leading to greater commercialization of the resource as well as a restructuring of the legal, regulatory, technical and institutional frameworks for water. The contributions to this book critically analyse legal issues arising under international law, such as environment and human rights provisions, concerning the economic, environmental and social consequences of proposed water regulatory changes and their implementation at the national level. The book examines the situation in India which is currently in the midst of implementing several World Bank led water restructuring projects which will have significant impacts on the realisation of the right to water and all other aspects of water regulation for decades to come. In analysing the situation in India the volume is able to detail the interactions between international law and national law in the field of water, and to ask broader questions about the compliance with international law at the national level and the relevance of international law in national law and policy-making.

**Environmental Processes and Management** Prabhakar Shukla 2023-03-01 This book is Volume 2 which is published to complement "Environmental Processes and Management: Tools and Practices" (<https://link.springer.com/book/10.1007/978-3-030-38152-3>), 2020 This book provides an in-depth, well-researched and science-based approach to applying key project management and spatial tools and practices in environmental projects. This book is an important read for leaders considering projects that balance social-economic growth against minimizing its ill effects on Planet Earth. This book brings together several aspects of groundwater engineering, as well as the formula and analytical approaches required for more informed decision-making. It also highlights the vital importance of understanding the technological, economic and social dimensions of environmental studies explained through dynamic approaches and illustrative figures that have short-term results and long-term impacts. This book emphasizes on encouraging the modern and vibrant research works conducted by young researchers across the world. This book clearly details the general application of fundamental groundwater processes, the character of the different types

of systems in which they occur and the way in which these factors influence process dynamics, environmental systems and their possible remedies. The book sets a possible recommendation for the professionalism with which environmental research should be planned, executed, monitored, assessed and delivered. While primarily intended for professionals responsible for the management of groundwater projects or interested in improving the overall efficiency of such projects, it is also useful for managers in the private, public and not-for-profit sectors. The book is a valuable resource for students at both undergraduate and postgraduate levels. In addition, this book serves as an indispensable guide for anyone willing to develop their skills in modern groundwater / environmental management and related techniques

to the built environment. The concepts of sustainability in built environment conclude with reimagining the city. The content includes pedagogical features such as examples, simple flowing language and over 100 figures. The book aims to motivate architects, engineers, consultants, builders, and planners to respond to the challenges of sustainability in the built environment.

*Wastewater to Water* Makarand M. Ghangrekar 2022-11-21 This textbook offers a complete comprehensive coverage of wastewater engineering from pollutant classification, design of collection systems and treatment systems including operational guidelines for the treatment plants. Apart from the primary and conventional secondary wastewater treatment, this book covers the details and design of advanced biological treatment systems such as sequencing batch reactor (SBR), up-flow anaerobic sludge blanket (UASB) reactors and hybrid reactor, with design examples and photographs of actual working reactors which is useful for students and practicing engineers. This textbook is designed to provide complete solution for the wastewater engineering for easy reference to the users. This textbook is an ideal reference for courses taught at the university undergraduate and postgraduate level in the field of civil/environmental engineering, chemical engineering, water management and environmental science. It should also appeal to practicing engineers in the wastewater engineering and effluent treatment plant designers.

**Water Supply and Sanitation** IK 2023-03-07 Water scarcity and sanitation are two major challenges that are affecting over 40% of the global population. More than 80% of the waste water resulting from human activities is dumped in rivers or the sea without any kind of water treatment. To respond to this crucial need, appropriate technologies of water treatment and supply are discussed in this book. A unique feature of this book is the way in which chapters interact. Cross-references between theory and application foster overall integration of subject

matter. This volume will assist process engineers, water treatment plant operators and managers, environmental consultants, water treatment plant operators, U.G. and P.G. students of civil, environmental and chemical engineering. Recommendations of various Indian Standards pertaining to the subject including Water Manual by Central Public Health and Environmental Engineering under Ministry of Urban Development has been incorporated and followed. All the chapters are organised with definitions, design principles and theories.
